TikTok Shop Southeast Asia Regional Case Challenge | Vietnam

"Tết Trọn Niềm Tin" 12.12 Campaign

"TRUST IN EVERY CLICK" PROJECT

Earn the trust, earn the USD $1M.
Don't buy it.

A complete, customer-centric and AI-leveraged risk control playbook.
It will guide TikTok Shop move beyond subsidies by earning customer trust, streamlining in every customers' step, and making every purchase count.

12.12
One Day.
One Creator.
One Million.

TikTok Shop is out-growing Shopee, and trust is the gap to win

TikTok Shop is growing faster than Shopee

GMV, VND trillion (H1 2025 implied from reported growth)

TikTok Shop GMV is up 27% year on year against 15% for Shopee, and it now holds 43.4% of GMV against Shopee's 54.5%.

Livestream is mainstream shopping content

45% Livestream shopping is the most widely consumed shopping content format, reaching 45% of respondents on the previous day. Influencer reviews reach 24%.

63% 63% of online shoppers engage with livestream shopping and 53% with shoppable video.

Where the opening is: win on trust, and depend less on subsidy.

68% say price and promotion decide where they shop online, up from 64%[1]

67% want a guarantee that products are authentic[1]

EXECUTIVE SUMMARY

Strategy

1. Who: Creator B
2. Drivers: GMV drill-down formula combined with the 4Cs customer-centric lens
3. Actions plan followed by a stage-optimised live funnel

Ops Plan

4. Plan: 63 days, staged risk control, supported by Mission Control AI (Tích Tắc 12.12)

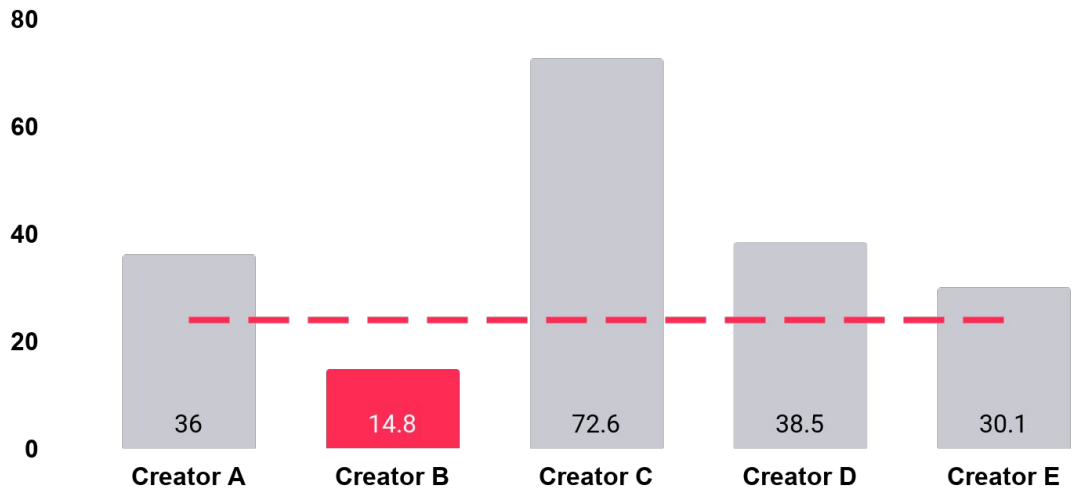

Source: Burrage, R. (2026, Aug 18). Vietnam e-commerce 2026: Media and shopping trends. Cimigo. https://www.cimigo.com/en/trends/vietnam-e-commerce-2026/. Marketplace data from YouNet ECI; survey: Cimigo Media Habits, n=1,701, ages 15 to 44, households earning VND 10M or more per month. Shopee H1 2026 implied from reported 15% growth.

Creator B is the only creator whose peak GPH already covers $1M in a 24-hour window

Hours needed to reach USD 1M at each creator's GPH

Only Creator B finishes inside the 24-hour campaign day

Creator	Hours needed at own GPH (USD 1M ÷ creator GPH)	Fits in one day?	December demand fit
Creator A	36.0	No	1.39
Creator B	**14.8**	**Yes**	**1.42**
Creator C	72.6	No	1.31
Creator D	38.5	No	1.15
Creator E	30.1	No	1.32

1 **It fits in one day**

At its peak GPH Creator B needs 14.8 hours; the other four need 30 to 73. That peak ran 8.5 hours, so holding it for 15 is the Q4 risk.

2 **It has the strongest engine**

GPH of USD 67.8K is 2x the next best, with the most views per hour.

3 **Right categories and audience**

H&B and Fashion are 98% of B's sales and the top December categories. 65% female, 65% aged 18-34.

Note: Peak session data, last 3 months. GMV contribution (%) is for the top 3 categories (Table 3), 99.4% for Creator B. Index from Table 4 (December). Hours needed = USD 1M ÷ peak GPH; a 24-hour day needs USD 41.7K per hour. December demand fit = Σ (GMV category contribution (%) × December demand index) ÷ Σ GMV category contribution (%).

Customer-Centric 4C's Effected Creator B's GMV

Drill-down Formula

$$GMV = [\text{Total views} \times (\text{Total orders} \div \text{Total views} \times 1{,}000 \times \text{AOV})] \div 1{,}000$$

1. Traffic
2. Conversion (orders per 1,000 views)
3. Order value

Gap to Close

Today: **44.1M × (1.27 × 10.3) ÷ 1,000 = USD 0.58M**

Target: **76.5M × (1.27 × 10.3) ÷ 1,000 = USD 1.00M, +74%**

Where the +74% comes from

B's Historical Data: 15 live hours at 5.1M views per hour. Conversion (1.27) and order value (USD 10.3)

For every element in the table, ask the 4 questions

4Cs	Creator's B Customer Profile	TRAFFIC	CONVERSION	ORDER VALUE
Customer Needs	65% female; 65% aged under 35; H&B and Fashion are 98% of GMV	Will the teaser tell exactly when her H&B or Fashion deal drops?	Will proof on shade, size and official stock show that this hero product fits need?	Can the customer build one relevant Tet-ready Beauty + Fashion set, not just buy random items?
Cost	Weighted average order value ~ USD 10.3	Is the scheduled deal attractive enough to click, without giving every viewer a subsidy?	Is the timed brand-funded deal strong enough to convert after proof?	Does free shipping at a cart threshold make one more item worth adding?
Convenience	Peak hours[1]: 11:00–13:00 and 19:00–22:00; For You Feed; profile-tap content; live shopping flow	Can customers see the schedule through For You, Following and profile-tap videos before the LIVE?	Can customers save the item, claim the deal and pay before the drop closes?	Can customers pre-add several items and check out in one transaction?
Communication	Gen Z (15-30) interest: creator-led formats[1] Millennials (31-44) interest: livestream shopping[1]	Is the 12.12 schedule clear enough for customers to know when and why to join?	Does Creator B explain proof, shade, size and urgency clearly?	Are the spend threshold, shipping benefit and bundle saving clear before checkout?

Note: Figures are Creator B's peak session in the last 3 months (Table 1) and top 3 categories (Table 3). Targets and basis for every KPI are in Appendix A.

12.12 Campaign Actions followed by Live Funnel Steps

WHAT TO SELL

Categories: H&B about 60% and Fashion about 40%, B's proven mix (98% of sales).

Products: Hero skincare, makeup and apparel sets, especially in bundles.

Brands: **Official stores and authorised sellers *(addressing "TRUST BUILDING' focus)***, with authentic stock shown on camera for the **67% who want authenticity guaranteed.**

Live funnel step	Key action	Driver it moves	Subsidy
0 Pre-Live Day Before D-day	**Educate on the 12.12 plan.** Post the LIVE hours, brands and deal drops as teaser videos on For You and Following. **Incentives.** *Five 0-Dong Deals for High-Value Products.*	**Traffic**	**No** **Platform-funded**
1 Feed impressions Before viewers enter	**First-Hour Seeding Ads and Dip-Hour Reminding Ads.** Ads carry 12pp more traffic on campaign days, so TTS media support and brand-funded ads run from the first hour and are topped up when the dashboard shows a dip.	**Traffic**	**Platform-funded**
2 Enter LIVE room Viewers join the LIVE	**Tease the deal & Incentives Countdown.** Limited vouchers/ incentives and hidden drop times give viewers a reason to stay and to return at each drop.	**Traffic**	**Brand-funded**
3 Keep watching Viewers stay in the room	**Boost engagement:** Using Interactive Commerce, Gamification Strategy, Call-to-Action Optimisation, Incentive Program **Consult and prove.** Advise on size and shade, show official brand stock on camera, and say when the right size may sell out.	**Conversion**	**Brand-funded** **No**
4 Add to cart Viewers pick products	**Encourage pre-add before the drop.** Ask viewers to pre-add more than one item so the basket is ready for a fuller order.	**Conversion, Order Value**	**No**
5 Place order Viewers check out	**Free shipping, plus a threshold.** Free shipping removes checkout friction. A spend threshold of USD 12 to 13 unlocks a saving and lifts items per order. **Incentives.** *Discounted Vouchers for High-Value Orders.*	**Close Conversion, Order Value**	**Platform-capped** **Brand-funded**

■ Good Signal ■ Cautious Signal

Note: Each action answers the 4Cs questions on page 4. No = no price cut. Platform-capped = free shipping, the only platform-funded lever; it is parity with Shopee, not a differentiator. The cap is tested at the 11.11 rehearsal.

63-Day Operational Plan with Tested Subsidy Cap and AI-leveraged Mission Control Tool

"Tích Tắc 12.12" Mission Control AI Assistant. TTS Ops enters hourly GMV, orders, views and cancellations. It tests each hour against the USD 66.7K pass mark, flags Watch after 1 miss and Act now after 2, and names the next move and its owner. See Appendix A.

	1. Commit Oct 10 to 23 | T-63 to T-50	2. Build Oct 24 to Nov 6 | T-49 to T-36	3. Prove Nov 7 to 13 | T-35 to T-29	4. Lock Nov 14 to Dec 11 | T-28 to T-1	5. Live day 12 Dec | T0 8:00 to 23:00
Deliverables	Signed creator agreement. 15-hour shift plan and roster. Studio and crew booked. Brand and seller shortlist by time window.	Signed hero brand deals and bundles. Stock committed by size and shade. Voucher plan. 12.12 deal calendar by time window.	**11.11 rehearsal data:** GPH and funnel rates by hour. Tested deal-drop triggers and cart prompts. Teaser and ad creative.	Teasers and ads live. Final run of show with host scripts. Final stock, price and voucher checks. Hourly dashboard.	15-hour livestream in shifts. "Tích Tắc" AI tool tracks GMV and cancellations every hour. Review on 13 Dec.
Key actions	Creator: agree the 15-hour day. TTS: lock studio and crew, brief Creator E as standby. Brand: shortlist H&B and Fashion brands.	Brand: sign hero brands first, then bundles, with two backups per category. Brand and TTS: set vouchers and build the deal calendar.	TTS: run 11.11 as the full rehearsal, record GPH and funnel rates by hour, tune deal cadence. Creator: test size and color consults.	TTS: launch teasers and ads, review weekly, dress rehearsal 5 Dec, final checks 9 to 11 Dec. Creator and Brand: finalize scripts and stock.	Creator and Brand: run the show as planned. TTS: watch the AI tracker, adjust pace, top up ads, fix issues live. All: review on 13 Dec.
Most critical risk	Creator does not commit to a 15-hour day, our biggest lever for views.	Hero brands and stock not secured, which caps GMV before traffic matters.	11.11 rehearsal falls short of plan, leaving too little time to fix the playbook.	Audience does not build, or stock, price and voucher errors are found too late.	GPH decays as the session runs long: fading traffic and host fatigue mean fewer orders per hour.
Early warning signal	Agreement or shift plan still unsigned by 23 Oct.	Under 70% of target stock committed by 6 Nov (proposed threshold).	11.11 GPH under USD 68K, or sign-ups for the 12.12 teasers below plan.	Weekly teaser views below the ramp plan, or dress rehearsal shows a stock or price mismatch.	Hourly GMV under USD 66.7K for 2 hours in a row, or subsidy near the cap.
Preventive control	Get written commitment first, including the 15-hour shift plan.	Lock hero brands before bundles, two backups per category, weekly stock check.	Go or no go on 14 Nov: 11.11 GPH at least USD 66.7K, otherwise a fix sprint on deals and ads before we lock.	Shift ad budget weekly, swap teaser creative, final checklist with owners and buffer stock.	Shifts of about 5 hours, each with a fresh hero deal, ad top-up and co-host swap. AI flags a slow hour: adjust pace, not subsidy.

Playbook: dates are T minus days, so they shift with any campaign day. Creator = Creator B, Brand = Brand Representative, TTS = TikTok Ops Team.

Appendix A: Five numeric gates keep Tích Tắc 12.12 Mission Control AI anchored to the USD 1M target

How it works on 12 Dec

1. **Enter.** Every hour at :00, TTS Ops copies cumulative GMV, orders, views and cancelled GMV from the TikTok Shop LIVE dashboard.
2. **Test.** Each hour is tested against the fixed pass mark of USD 66,667 (USD 1M ÷ 15 hours).
3. **Flag.** On pace, Watch after 1 miss, Act now after 2 in a row, Fix data if the numbers do not add up.
4. **Act.** It shows the pre-agreed next move and its owner, taken from Q3 and Q4. Nothing is generated by AI on the day.

First used at the 11.11 rehearsal, which also sets its cancellation benchmark.

Control factor	Number	Basis
Runway	**63 days**	10 Oct–12 Dec
Live format	**15 h**	USD 1M ÷ GPH 67,782 = 14.8 hours, rounded up to 15
11.11 gate	**≥ USD 68K GPH**	B's GPH: USD 575,976 ÷ 8.5h = USD 67.8K/h
Commercial readiness	**≥70% stock; 2 backups per category**	Management rule: leaves time to replace hero brands before 11.11
Live-day trigger	**< USD 67K/h for 2h**	USD 1M ÷ 15h = USD 66.7K/h; two hours filters flash-deal

Tool: https://aitoolforriskcontrol.vercel.app/. Hourly figures are entered by TTS Ops from the TikTok Shop LIVE dashboard; the tool checks pace and does not replace the dashboard. Cancelled orders can still rise after the live, so the 13 Dec figure is re-entered for the final net GMV.
